HELLO !

Hello, my name is Shivani Kishor Bhosale. I have completed my BCS graduation and currently I am pursuing an M.Sc. in Computer Science. I am interested in Data Analytics. In this project, I used SQL queries to analyze pizza sales data and answer questions related to pizza sales.

PROJECT OBJECTIVES

- Project ObjectivesAnalyze pizza sales data using SQL.
- Calculate total orders and total revenue.
- Identify the most popular pizza sizes and types.
- Analyze pizza sales by category and time.
- Identify top-performing pizzas based on revenue.
- Calculate revenue contribution and cumulative revenue.

DATABASE & SCHEMA

Database Name : pizzahut

Database & Schema

Database Name

pizzahut

Tables Used

orders

- Contains order date and order information.

order_details

- Contains pizza quantity and order details.

pizzas

- Contains pizza name, size and price.

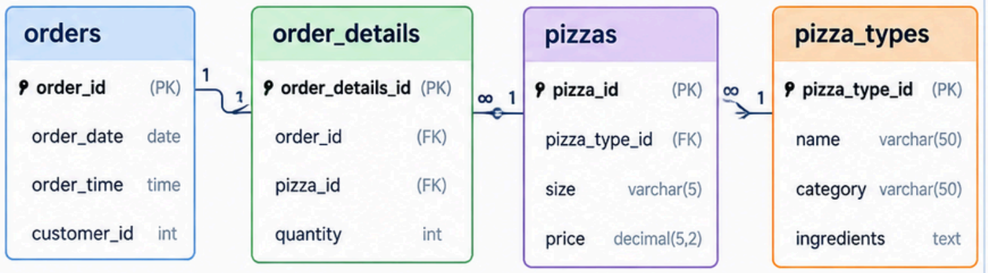

pizza_types

- Contains pizza name, category and ingredients.

Purpose

These tables were used to analyze pizza sales data using SQL queries.

Database Schema / Relationship Diagram

PROJECT QUESTIONS

Basic Analysis

1. Total number of orders
2. Total revenue generated
3. Highest-priced pizza
4. Most common pizza size
5. Top 5 most ordered pizza types

Intermediate Analysis

6. Quantity by pizza category
7. Orders by hour
8. Category-wise pizza distribution
9. Average pizzas ordered per day
10. Top 3 pizza types by revenue

Advanced Analysis

11. Percentage contribution to total revenue
12. Cumulative revenue over time
13. Top 3 pizza types by revenue for each category

TOOLS & TECHNOLOGIES

Tools & Technologies Used

- MySQL Workbench – To create the database and execute SQL queries.
- SQL – To analyze pizza sales data.

CONCLUSION

THIS PROJECT HELPED ME ANALYZE PIZZA SALES DATA USING SQL IN MYSQL WORKBENCH. I USED SQL QUERIES TO ANALYZE ORDERS, REVENUE, PIZZA SIZES, CATEGORIES, AND TOP-PERFORMING PIZZAS.
